Crystal Silver Star S

Loudspeaker cable, silver-plated, 2x2.5 mm², with Solution lug

Excellently coordinated loudspeaker cable for connecting AV receivers or amplifiers and loudspeaker boxes. The cable is preassembled with Oehlbach Solution cable-shoe connectors to allow convenient connections and guarantee a stable quality of transmission. The sophisticated star-shaped air tubes located in the two conductors and in the central separator deliver two benefits: on the one hand, the cable becomes very stable without loss of flexibility and, on the other, both cable leads have been arranged precisely to the millimetre in relation to each other, which results in outstanding electrical parameters. Which means that air is actually used as the perfect insulator in the Crystal Silver Star. The clever stranding of the 50 individual silver-plated inner conductors, each measuring only 0.254 mm, effectively minimizes the skin effect.

Features

- ✓ SPC - silver-plated copper
- ✓ Individually stranded wire bundles
- ✓ For amplifier performances of up to 140 watts
- ✓ 24 ct gold plated plug
